Travel Blog Application

In this lesson, we will discuss how to build a travel blog application and what we want it to be able to do.

In the previous lessons, we learned some basics of Android development. It's time to start working on a real Android application to gain some practical skills.

During all the future chapters, we will be working on a Travel Blog Application which consists of the following screens:

- *login screen* where you can enter your details and log in
- *blog list screen* where you can see a list of blog articles, with a possibility to search, filter or click to open *blog detail screen*
- *blog details screen* where you can check more details

To make it easier to understand what the overall application structure will look like, here is a sneak-peak of what we are going to build.

G'day mate! Welcome to Sydney, where you come for the beaches, but stay for the restaurants, the culture and the good vibes (but also, the beaches). We promise we're friendly here, but between the one-way streets, our four different forms of public transport and the fact that our urban design is more 'bowl of spaghetti' than 'grid', we know it can all be a little bit confusing. Here's how to survive and thrive in the city, whether you're here for a few days, or the rest of your life.
Looking to take a break from city life? Head to these glorious campsites near Sydney, or stretch into the weekend on these short getaways.

If you are ready, proceed to the next chapter where we will learn how to create a login screen.
