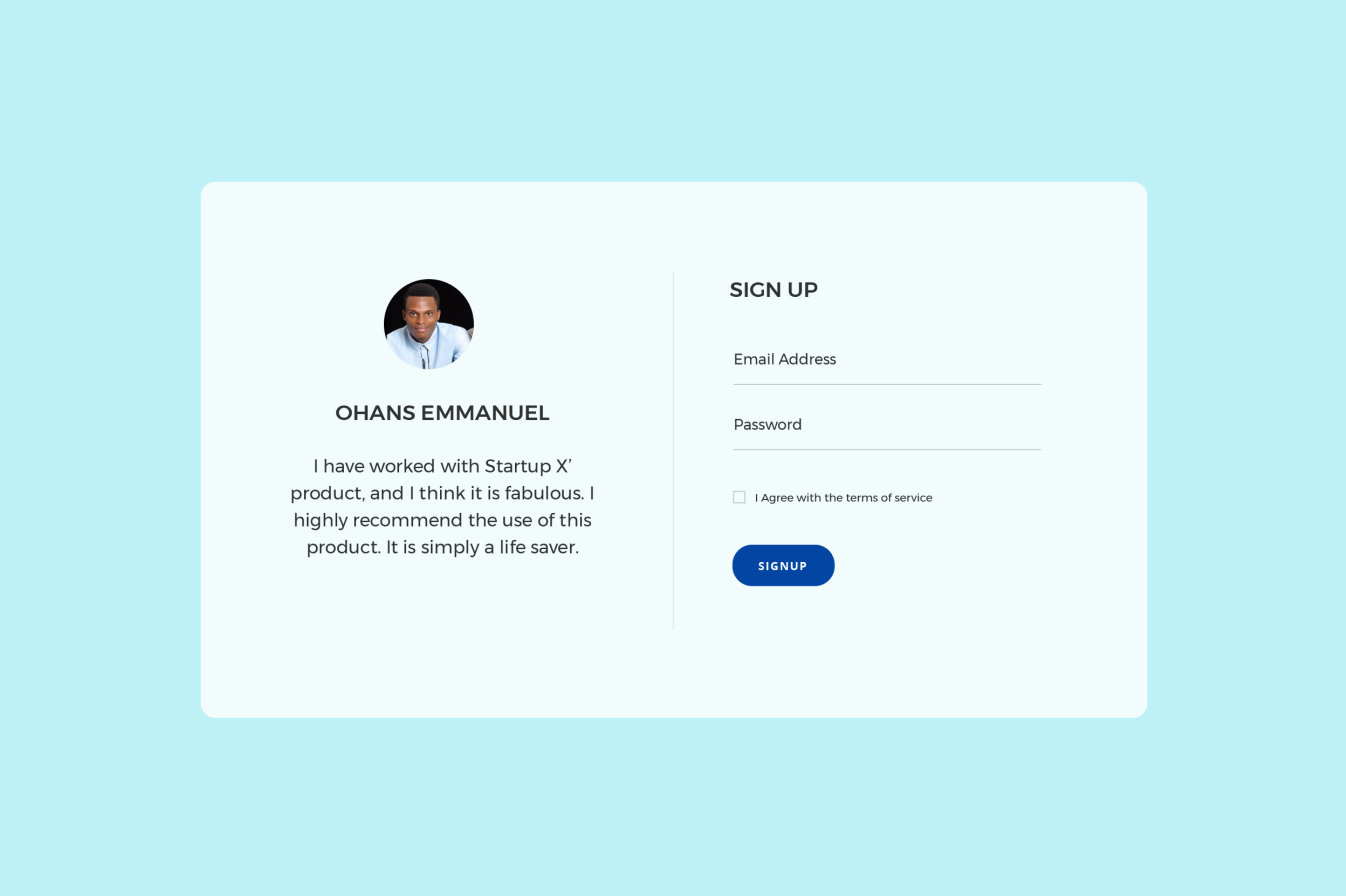
Getting the Document Structure Right

While it's easy to just jump at the styling (css) hoping to get things right, all good designs begin with well structured `html` documents.

Let's do that.

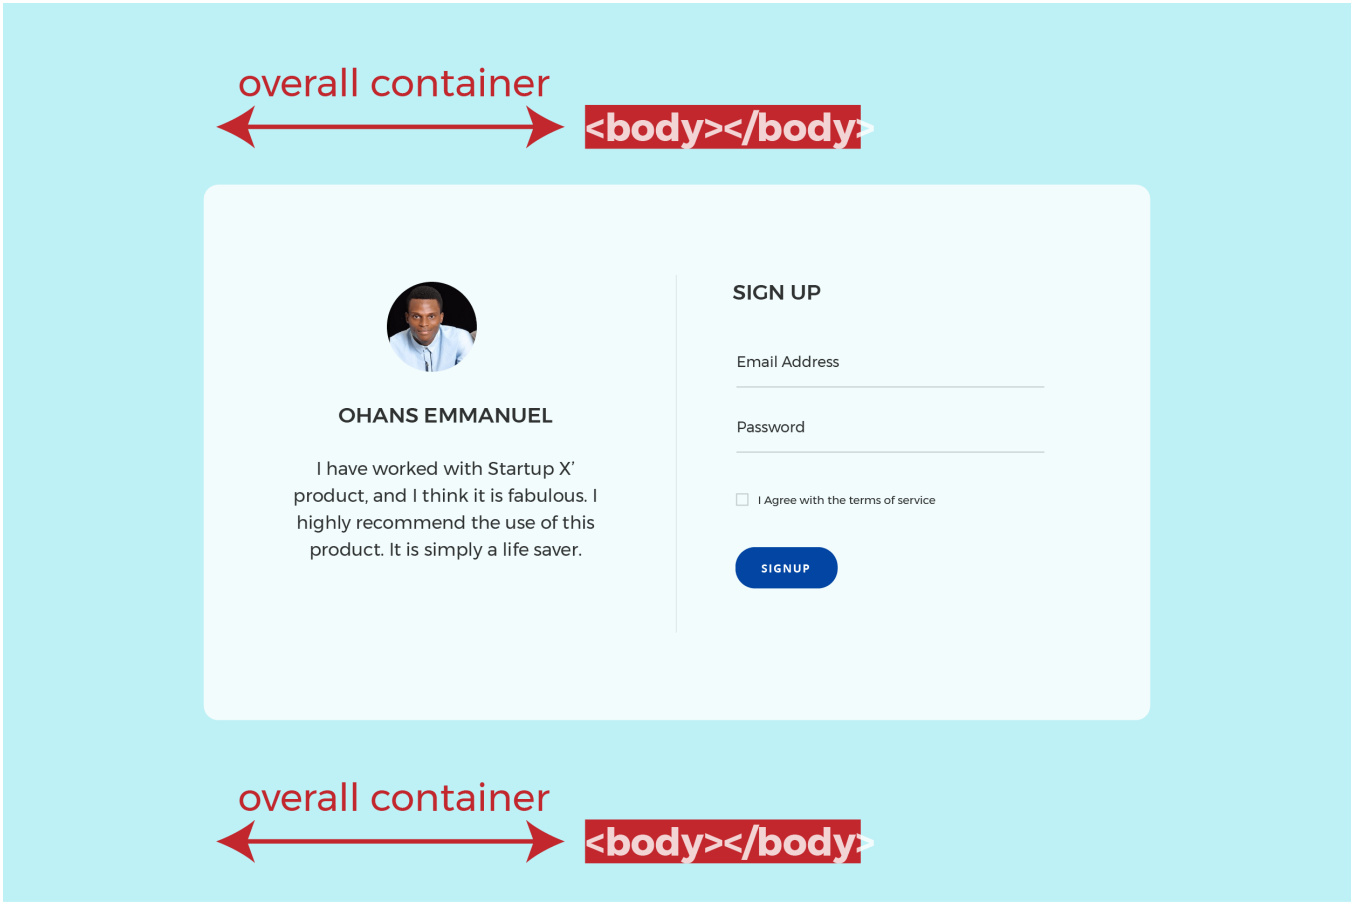
General Overview

Take a look at the finished design again:



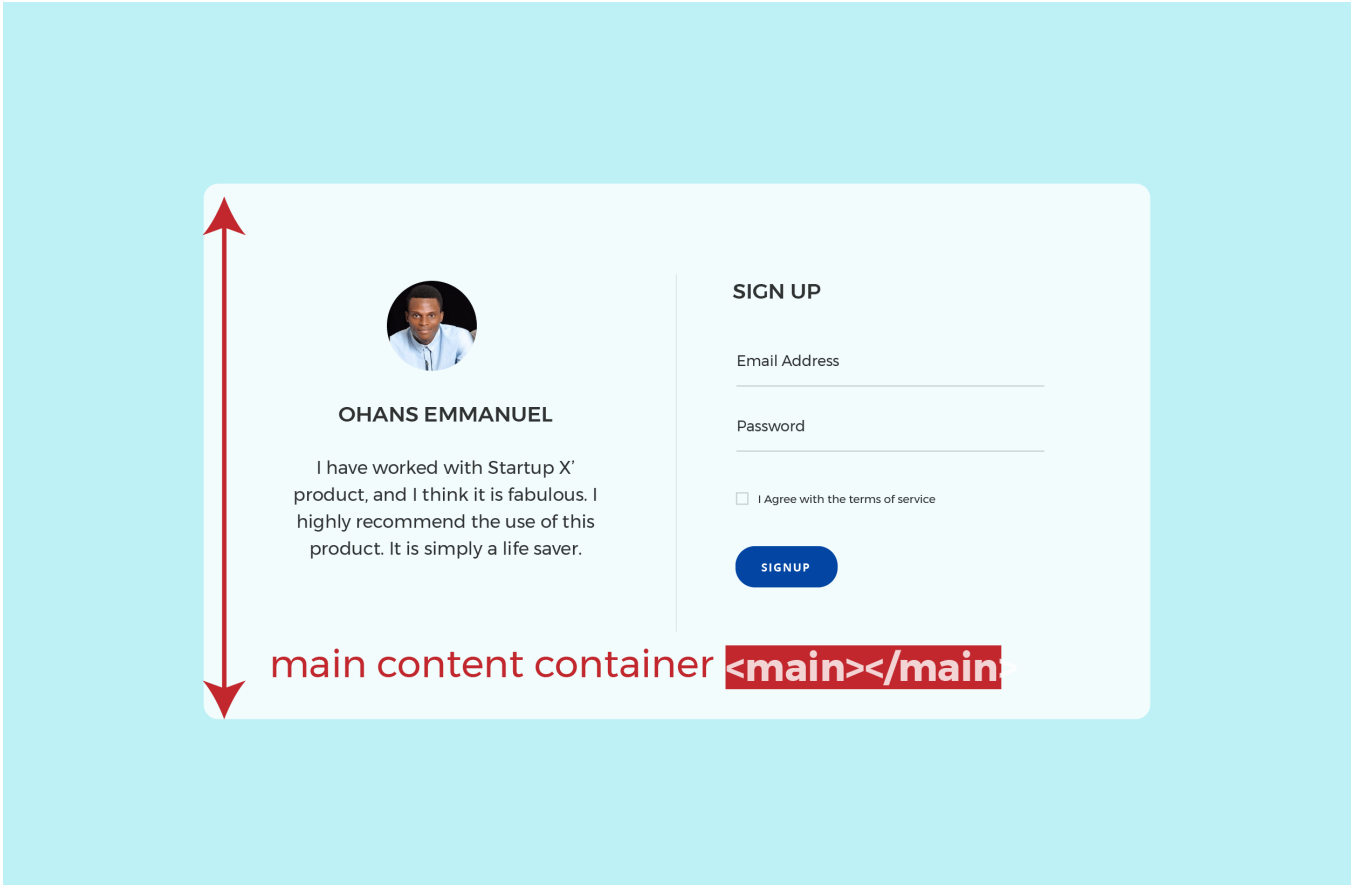
Now, let's analyze it.

First, we have a overall colored container.



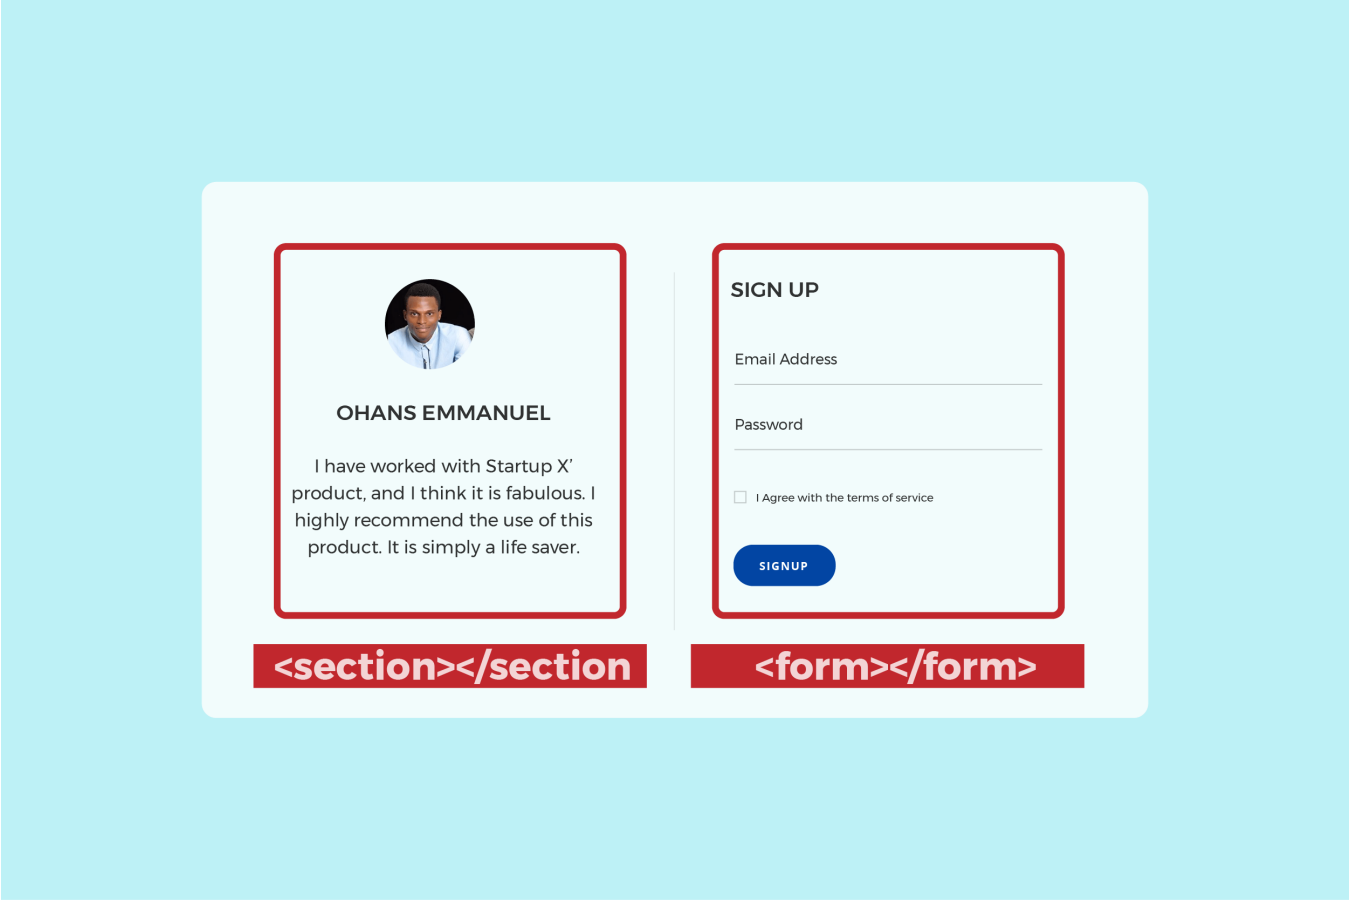
The best candidate for this is the `body` tag.

Secondly, we've got another container that sits in the middle of the page. This houses all the main content of the page.



This will be represented with a `main` tag.

In this main content container, we have two other sections. One containing the customer's testimonial, and the other, the actual signup form.



The `section` will have a class names of `.testimonial` and the form, `.signup-form`. Everything else should be easy to understand.

With that, we have this initial document structure:

```
<html>
 <head>
   <title>Signup Form for Startup X</title>
 </head>
 <body>
    <main>
        <section class="testimonial">
            <img src="http://i.imgur.com/10YZZqN.jpg" />
            <h3> Ohans Emmanuel </h3>
            <p>
                I have worked with Startup X' product, and I think it is fabulous.
                I highly recommend the use of this product. It is simply a life saver.
            </p>
        </section>
        <form class="signup-form">
```

```
            <h3> Signup Form </h3>
            <div>
                <input type="email" name="email" placeholder="Email Address">

                <input type="password" name="password" placeholder="Password">
            </div>
            <div>
                <input type="checkbox" name="agreement">
                <span>I Agree with the terms of service</span>
            </div>
            <button type="submit"> SIGNUP </button>
        </form>
    </main>
</body>
</html>
```

Take a look at the code above. It should make sense to you.

I have tried to keep the markup minimal - with no unnecessary `div` added.

Having got the markup out of the way now, let's begin styling the document in the next lesson.

I'm excited about this 😃
