

Challenge: Convert a Floating Point Value into a Percentage Value

Here is a coding challenge to test your knowledge of formatted output.

WE'LL COVER THE FOLLOWING ^

- Problem statement
- Input
- Output
- Challenge

Problem statement

Write a program that converts a given floating point value into a percentage and displays it with two digits after the decimal mark.

Input

```
1.2345
```

Output

```
%1.23
```

Challenge

This problem is designed for you to practice, so try to solve it on your own first. If you get stuck, you can always refer to the explanation and solution provided in the next lesson. Good luck!

```
import std.stdio;  
  
void Convert() {
```

```
double value =1.2345;
```

```
//Replace the below code line with your code
```

```
write(" ");
```

```
}
```

Code to print floating point value as percentage value

In the next lesson, we will look at a solution to this coding challenge.
