

Quiz

This lesson covers multiple choice questions related to basics of JavaScript.

1

Following JavaScript command shows a message in the console, an information zone available in most JavaScript environments.

2

Is the following statement correct?

The JavaScript language uses the number type to represent a numerical value (with or without decimals) and the string type to represent text.

3

Observe the following program and choose the correct output:

```
console.log(4 + 5);  
console.log("4 + 5");  
console.log("4" + "5");
```

4

Applied to two strings, the `+` operator performs addition if strings contain numeric values.

5

Is the following statement correct?

A computer program is made of several lines of code read sequentially during execution.

6

Is the following statement correct?

Comments (`// ...` or `/* ... */`) are non-executed parts of code.

7

In JavaScript, a string can be only surrounded by a pair of single quotes (`'...'`).

8

Observe the following program and choose the correct output:

```
console.log("My name is");  
/*  
Jane  
*/  
console.log("\n, what is your name?");
```
