- Feedback

Conclusion

The most important factor for any test automation is its reliability and stability. A good framework design encapsulates most of the common mistakes and errors that a developer can do while writing test automation.

The points discussed in the course around framework design will help you to build a robust, stable, and reusable framework.

We at Educative hope that this course was a good learning experience for you.

Feedback

As always, your feedback, comments, concerns, and questions are always welcome! Drop us an email or a comment on the community forum.
