

Quiz

Test your knowledge on identifiers with this fun quiz!

1

By default, `let` bindings are mutable.

2

What will be the output of the following piece of code?

```
let a: string = "Hello";
{
  let a = a ++ "Educative";
  Js.log(a);
};
Js.log(a);
```

3

What can be used to make a `let` binding mutable?

4

Which operator can be used to access the reference inside a `ref` wrapper?

5

What will be the output of this code?

```
let str: char = "Educative";  
Js.log(str);
```

```
    console.log(x);
```

Check Answers

In the next chapter, we will study the primary data structures of ReasonML. But before that, try solving the coding exercise in the next lesson.
