

# Quiz

In this quiz we will test what we have learned about creating projects with Create React App.

## Creating projects with Create React App

1

What is the command line option for the `create-react-app` command to create a React project with TypeScript?

2

What is the file extension for React components that use TypeScript?

3

What npm command can be run to produce a production ready build?

4

What npm command can be run to execute the Jest tests?

5

What npm package do we need to install to enable linting?

6

Prettier is popular code formatting tool. Is Prettier automatically installed by Create React App?

7

Prettier can be configured in a JSON file. What is the file name for this configuration file?

Check Answers

In the next chapter, we will learn how to create a React and TypeScript project without the Create React App tool.
