

# Quiz

Here is a quiz on conditional statements and loops.

1

Which statement can be used to start the next iteration of the loop right away?

2

Which statement can be used to exit the loop right away?

3

Predict the output of the following program:

```
import std.stdio;

void main() {
    bool takeRest = false;

    if (takeRest) {
        writeln("Finally, a break!");
    }

    else
    {
        writeln("Keep on learning");
    }
}
```

4

What defines the scope of a block of code?

5

An `if` statement can be used in the scope of an `else` statement.

Check Answers

In the next chapter, we will look into arrays, characters and strings.
