

Migration Services

Understand what an AWS migration means and how that helps you as a customer.

AWS Migration Hub:

Is a single location that aids in tracking the application you are migrating. This visualizes the applications and DB you are looking to migrate.

Application Discovery Service:

Automated set of tools that discovers the various applications you have. It also tries to understand and map the various dependencies between your applications.

Database Migration Service:

Is an AWS service that simplifies the way to migrate your on-premises application on to AWS.

Server Migration Services:

Helps in migrating you virtual and physical serves on to AWS.
