

# Installation

This lesson shows how to install the `css-theming` package.

## WE'LL COVER THE FOLLOWING ^

- Installing `css-theming`
- Modules
- JS
- SCSS

## Installing `css-theming` #

The `css-theming` package is released as an npm package.

```
npm v1.2.0
```

Type the following in your favorite terminal to install it:

```
$ npm i css-theming --save
```

## Modules #

There are both JavaScript modules (typescript type definitions available) and SCSS src files after you install the package.

## JS #

You use the JavaScript modules the usual way:

```
import { initializeTheming, ... } from 'css-theming';
```

## SCSS #

The SCSS src files are at `css-theming/src/scss/`:

```
// Change "../" depending on where your file is.  
@import '../node_modules/css-theming/src/scss/css-theming';
```

**Note:** Check the different samples in the GitHub repo to see this up close.

---

After you've successfully installed `css-theming`, move to the next lesson to begin the setup.
