

Quiz

A short quiz to test your understanding of classes.

1

The `new` keyword can be used to create an object of a Class?

2

The variable `f` below represents

```
<?php

class Foo {
    public $x = 100;
}

$f = new Foo;
echo "x is: ".$f->x;

?>
```

3

`$this->member` for accessing static members (methods and properties).

4

A destructor needs to be called at the end of the program.

5

What is the error in the code below?

```
<?php

class Dog
{

    private $age= 3;
    private static $name= "Ruffy";
```

```
public function getAge(){  
    return $this->age;  
}  
  
public function getName(){  
    return $this->name;  
}  
}  
  
$obj = new Dog;  
  
echo "Name is ". $obj->getName();  
echo "Age is ". $obj->getAge();  
  
?>
```

7

There is no difference in a protected and public variable of a mother class in terms of accessibility and use for a derived class.

Is this statement correct?

8

A derived class can change the definition of an inherited member.
