

## Exercise 2

1. Without running the code, determine the values of the below variables. You can write your answers as comments in the code editor and then compare them afterwards with the program output.

```
let a = typeof '';  
console.log(a);  
let b = typeof a;  
console.log(b);  
let c = typeof x;  
console.log(c);  
let d = typeof 25;  
console.log(d);  
let e = typeof null;  
console.log(e);  
let f = typeof 25 + ' '  
console.log(f);  
let g = typeof (NaN === NaN);  
console.log(g);  
let h = typeof null;  
console.log(h);  
let i = '' + 1;  
console.log(i);  
let j = typeof i;  
console.log(j);
```
