

Summing up

Here is a brief summary of what we've covered so far before we move on to the next section!

So far, you've learned what Sass is, how to install and run it on a local server, and we've looked at many of the features that no-doubt make it an extremely useful addition to your front-end skill set!

Using SASS, we write much cleaner code, reduce repetition by reusing code, organize our projects much more effectively and even build programmatic logic into our stylesheets.

SASS makes the maintenance of CSS a much easier task and actually saves us — as developers — a lot of time!

In the next chapter, we'll be looking at how we can go about structuring our SASS projects!

End of section Quiz

1

Which SASS feature lets group together multiple CSS declarations for reuse throughout your project?
