

# What's a Web Page?

This short chapter summarizes what you need to know about the Web and web pages.

## WE'LL COVER THE FOLLOWING ^

- Internet and the Web

Given below is an HTML code showing the contents of `<head>` tag.

### HTML

```
<!doctype html>
<html>

<head>
  <!-- Info about the page: title, character set, etc -->

  <!-- Link to a CSS stylesheet -->
  <link href="path/to/file.css" rel="stylesheet" type="text/css">
</head>

<body>
  <!-- Page content -->
  <!-- Link to a JavaScript file -->
  <script src="path/to/file.js"></script>
</body>

</html>
```

A browser is the software you use to visit webpages and use web applications. The modern ones include a set of developer tools to ease the task of developing for the web.

As you probably know, the [World Wide Web](#) (or Web for short) is an ever-expanding information space built on top of the [Internet](#). Web resources are accessible via their address, called their [URL](#), and can contain [hyperlinks](#) to other resources. Together, all these interlinked resources form a huge mesh analogous to a spider web.

Documents suitable for the Web are called web pages. They are grouped together on websites and visited through a special kind of software called a [browser](#).
