

# Quiz

A short quiz to test your understanding of operators in C#

1

The associativity of Unary Operators is:

2

In the code below what value of `var` will be displayed at the end?

```
int var;  
int temp = 4;  
var = temp--;  
Console.WriteLine("Value of var is: {0}", var);
```

3

The associativity of Relational Operators is:

4

In the code below what value of `temp` will be displayed at the end?

```
int temp;  
int var = 7;  
temp = ++var;  
Console.WriteLine("Value of temp is: {0}", temp);
```

5

The logical negation operator (!) is a logical operator that works on bool values, changing true to false or false to true

6

In the code below what value of `answer` will be displayed at the end?

```
int answer;  
int temp = -4;  
answer = -temp;  
Console.WriteLine("Value of answer is: {0}", answer);
```
