

# Component Stats

In this lesson, we'll discuss the information given by component stats.

## WE'LL COVER THE FOLLOWING

- How to Get Component Stats?
- Information Given by Component Stats

## How to Get Component Stats? #

Whenever you zoom into a component within the Profiler by clicking its associated stat, the relative session is shown along with the time it took to be rendered.

## Information Given by Component Stats #

The component stat displays how many times a particular component was re-rendered during the recorded interaction.

As you can see above, the three rows of the information under “Rendered At” represent the three times the **Clap** component was rendered. If I saw a fourth statement there, I’d begin to get worried as I only clicked three times and expected only three re-renders.

If the selected component didn’t re-render at all, you’ll be presented with the empty screen below:

Please note you can view component stats by double-clicking a component bar from the flame or ranked chart.

In the next lesson, we'll look at the bank app and how Profiler is helpful in identifying performance lags.
