

# Quiz on Concurrency Patterns

Test your learning and answer the following questions about concurrency patterns.

1

When you communicate over a channel that is returned from a function, this is an example of:

2

What is the result of the following code? Assume that some value is sent to the `done` channel after five minutes.

```
for {
  select {
    case <-done:
      return
    default:
  }
}
```

---

3

It is not possible to send a channel over a channel.

---

4

What do we achieve by sending a channel over a channel?

---

The best practice is when the receiver closes the channel and signals the sender that it will not be accepting any further input.
