

Solution Review: Celsius to Fahrenheit

This lesson explains the solution for the Celsius to Fahrenheit exercise.

WE'LL COVER THE FOLLOWING ^

- Solution
- Explanation

Solution

```
let convertTemp = (celsius: float) => celsius *. 1.8 +. 32.0;  
  
Js.log(convertTemp(40.5));
```

Explanation

This problem is pretty simple. We need to perform `float` arithmetic inside our function and return the computed value.

The point of this exercise was to make you comfortable with functions. Let's move on to some slightly trickier challenges.
