

# Quiz

It's quiz time! Answer the following questions to test your knowledge and understanding.

1

If an application server approves or rejects client requests, talks to back-end storage, schedules asynchronous processing, and passes back results to client devices, it is an example of a three-tier server setup.

2

Select all the features of Amazon Cognito:

---

3

Each IAM user has two keys. Select them from the list below:

---

4

Fill in the blank: \_\_\_\_\_ takes a map of conditions such as the expiration time of the policy, partial or full matching on the uploaded file key, maximum allowed length, and the default access level for the uploaded file.

5

Lambda functions work under temporary credentials that are only valid for a short period. Unfortunately, there is no way to generate signed URLs that last longer.
