

Quiz

Here is a short quiz to test your basic understanding of the concepts explained in this chapter.

1

What is the output of the following code?

```
import std.stdio;

void main() {
    char conversionRate;

    // Assigning the value 200.20 to the conversionRate variable:
    conversionRate = 200.20;

    writeln("Today's conversion rate is ", conversionRate);
}
```

2

`auto` can be used with any type even when the type is not spelled out on the right-hand side.

3

What is the output of the following code?

```
import std.stdio;

void main() {
    double value;
    typeof(value) conversionRate;

    // Assigning the value 200.2 to the conversionRate variable:
    conversionRate = 200.2;

    writeln("Today's conversion rate is ", conversionRate);
}
```

4

`write` is short for `stdout.write`.

5

In D, the character used to find the address of a variable is

Check Answers

In the next chapter, we will look at a few basic data types in D in detail.
