

Challenge: Fix the Code

Here is a coding challenge based on integer and floating point literals.

WE'LL COVER THE FOLLOWING ^

- Problem statement
- Output
- Challenge

In the code provided later in the lesson, the following line causes a compilation error:

```
int amount = 10_000_000_000; //Compilation error
```

Problem statement

Change the program given below so that the code compiles and displays the `amount`.

Output

Once the code is fixed, the output should look like this:

```
10000000000
```

Challenge

This problem is designed for you to practice, so try to solve it on your own first. If you get stuck, you can always refer to the explanation and solution provided in the next lesson. Good luck!

```
import std.stdio;
```

```
void DisplayAmount() {  
  
    int amount = 10_000_000_000; // fix this line  
  
    write(amount);  
}
```

Code to be fixed

The next lesson provides a solution to this challenge.
