

Exercise: Deduce the Outputs

In this lesson your concepts will be evaluated through a quiz.

Choose one possible correct answer.

1

If the following program is written in file **main.go**, and is executed via the command line as `go run main.go Evan Michael Laura` what will the output be?

```
package main
import (
    "fmt"
    "os"
    "strings"
)

func main() {
    who := "World"

    if len(os.Args) > 1 { // os.Args[0] == hello_who
        who = strings.Join(os.Args[1:], " ")
    }
    fmt.Println("Hello", who, "!")
}
```

We hope that you performed well in the quiz. That's it about the read and write operations in Go. In the next chapter, we'll discuss how to handle errors and test the code, in detail.
