

# Final Touches to the Message Input Component

Now, we'll create our design for the message display.

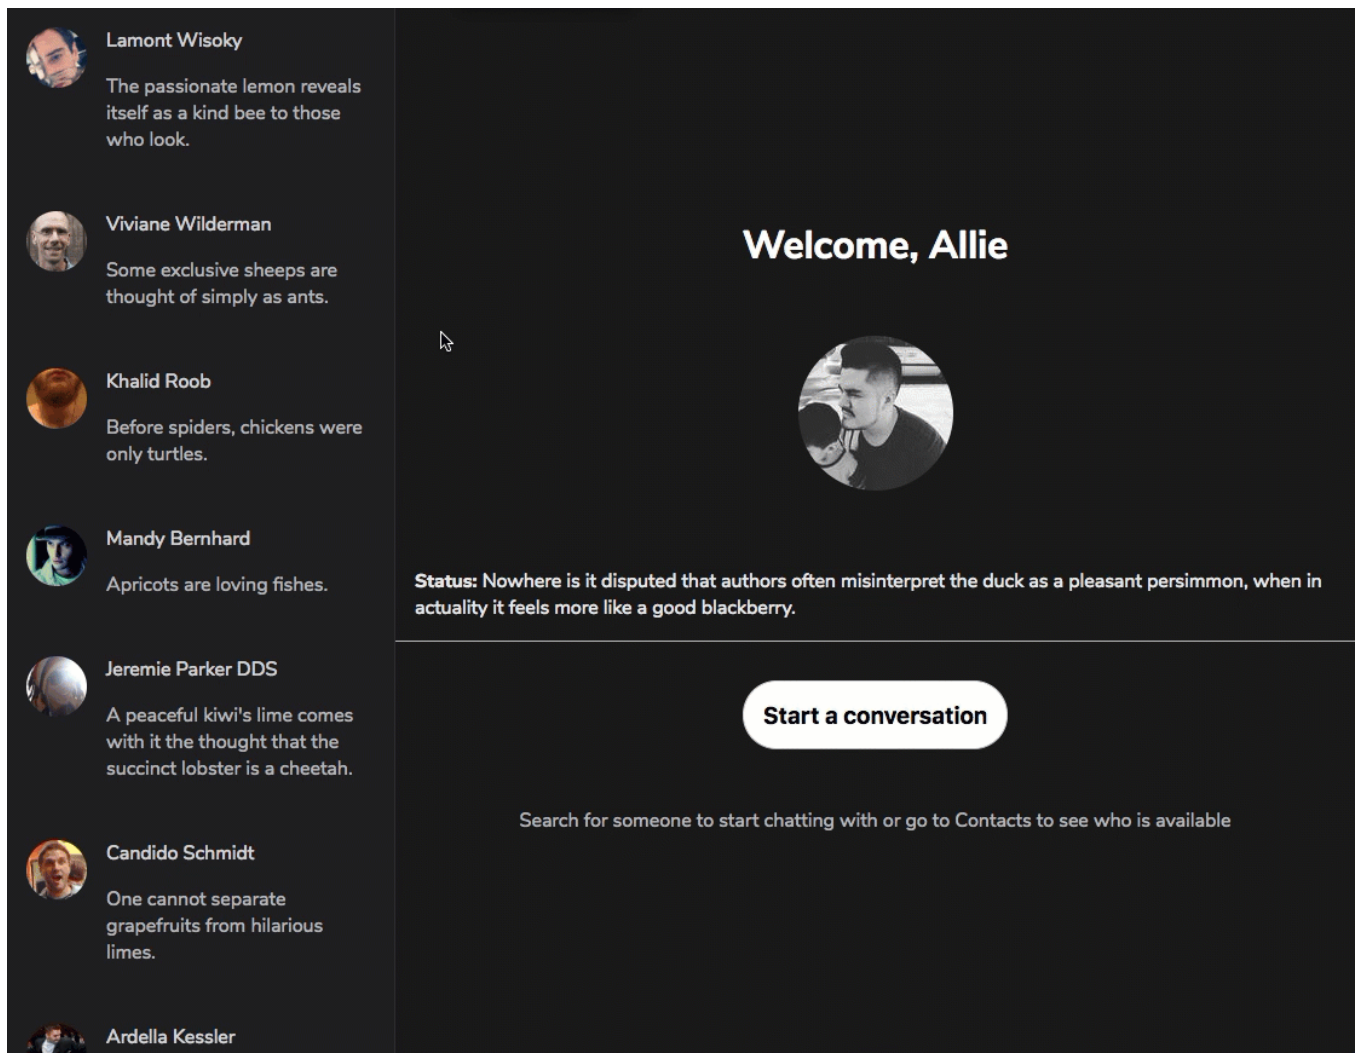

With everything set in place, let's make some changes to MessageInput.css file.

containers/MessageInput.css:

```
.Message {  
  width: 80%;  
  margin: 1rem auto;  
}  
.Message__input {  
  width: 100%;  
  padding: 1rem;  
  background: rgba(0, 0, 0, 0.8);  
  color: #fff;  
  border: 0;  
  border-radius: 10px;  
  font-size: 1rem;  
  outline: 0;  
}
```

That should be enough to do the Magic!

Looking better? I bet it is!

However, right now we can only type in this field. The data does not go anywhere... Yet!
