

Solution Review: Lower To Uppercase

This lesson will help you change the case of the string using a built-in function.

WE'LL COVER THE FOLLOWING

- Solution: Use `str.upper()` and `str.lower()`

Solution: Use `str.upper()` and `str.lower()`

Given a string “str”, use `str.upper()` to convert the string ‘str’ to **upper case**, and use `str.lower()` to convert string ‘str’ to **lower case**.

For example,

Given a string

```
str = "AAA bbb CCC"  
a = str.upper()  
b = str.lower()
```

Output:

```
AAA BBB CCC  
aaa bbb ccc
```

The following python code demonstrates how to change the letter case of a string.

```
def changeCase(s):  
    a = s.upper() # convert string to "AAA BBB CCC"  
    b = s.lower() # convert string to "aaa bbb ccc"  
    return [a, b]
```

```
str = "AAA bbb CCC"  
print(changeCase(str))
```

Now that you have solved challenges on numbers and strings, let's move on to the quiz.
