

Quiz

Here is a quiz to test your knowledge of the use of functions in D.

1

If a function has more than one return statement, then the value of the last return statement that gets executed determines the return value of the function of a particular call.

2

Functions that do not return any value to the caller have return type as

3

It is possible to have a function in the code that does not get executed.

4

In the code below

```
add( 5, 10);
```

the values '5' and '10' are:

5

Functions help remove ____

[Check Answers](#)

In the next chapter, we will explore the concepts of immutability.
