

Lazy Loading with React.lazy and Suspense

In this lesson, I'll be introducing lazy loading with React.lazy and Suspense.

“Hey John, we need to look into lazy loading some modules in the Benny application,” says Tunde, John’s manager.

John’s had great feedback from his manager for the past few months. Every now and then Tunde storms into the office with a new project idea. Today, it’s lazy loading with `React.lazy` and `Suspense`.

John’s never lazy-loaded a module with `React.lazy` and `Suspense` before now. This is all new to him, so he ventures into a quick study to deliver on what his manager has requested.

Before jumping into details, let’s check out what lazy loading is in the next lesson.
