

Last Thoughts

Final thoughts on the course.

Congratulate yourself on having made it successfully to the end!

As a professional programmer in a science or engineering field, you will encounter many problems where the solution strategy is entirely up to you. So, learn to take the problem head-on and never back down from learning something new. The goal of this course is to give you an understanding of scientific computing in Python so you can go ahead and explore more modules. This is just a small step towards the burgeoning field of computational science.

Before saying goodbye, there is something we want you to remember on your important journey as a computational scientist and engineer:

Success isn't always about greatness. It's about consistency. Consistent hard work leads to success. Greatness will come.
-Dwayne "The Rock" Johnson, actor

We hope you enjoyed this course and the best of luck with your future!
