

Planning and Investigation

Let's continue what we've started.

Below is the result of what we have now. Feel free to check the code.

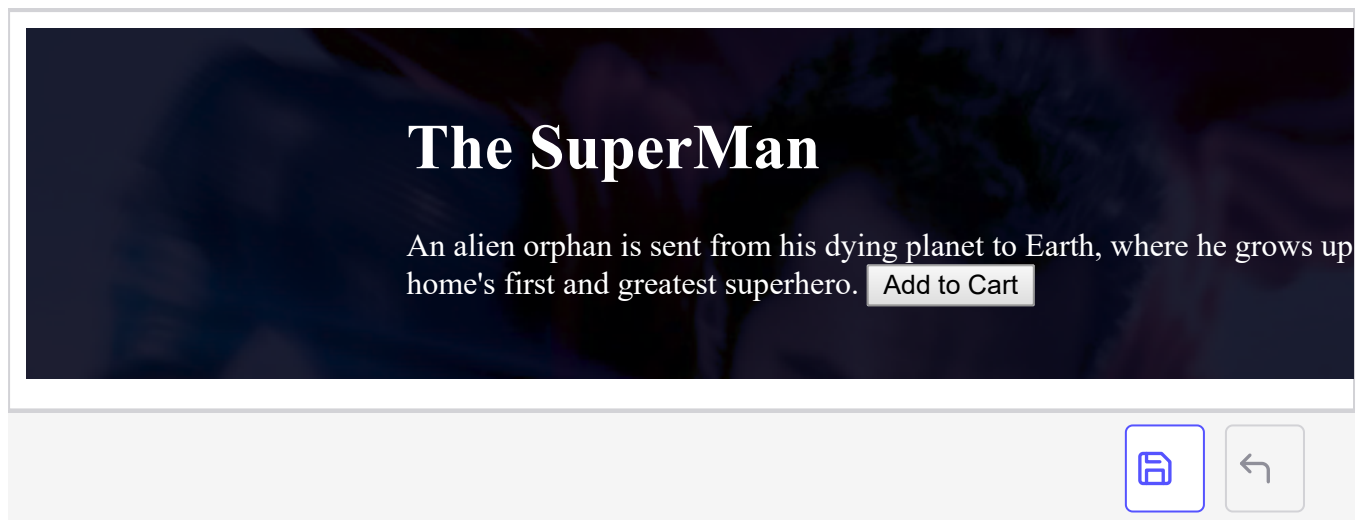

Output
HTML
CSS (SCSS)

 

I can't see anything 😊

That's because the font color is dark.

Give the font some color, and let's investigate further.

Output
HTML
CSS (SCSS)

Now, we can see what's going on.

The Problems

There are a couple problems we have right now. You may not see them, so let me point them out.

1. Take a look at the output above. There is a weird horizontal scroller present (try to scroll horizontally).

Didn't we set the width to a **100%**, then why do we have that scroller?

2. I can barely read the text. We have to deal with that.
3. See the button? It is unstyled. We have to deal with that too.

Aargh, let me stop there. It is saddening enough.

On the brighter side of things, I will walk you through solving these problems. There's a lot to learn in the processs, especially with problem 1.

I have decided to tackle this in a separate lesson.

Let's go ahead.
