

Quiz

A short quiz to test your understanding of the basic command operations in MongoDB.

1

In MongoDB, information for a given record is spread across many tables.

2

Collections are groups of related documents having the same structure.

3

A collection can contain multiple documents.

4

One of the features of MongoDB is that it has multiple-table transactions.

5

The `db` command is used to create a database.

6

`db.collection_name.remove(query)` is used to remove a collection.

7

By appending the `pretty()` method, data is presented in a formatted manner.
