

# Quiz

Here is a quiz to test your understanding of the concepts of contract programming in D.

1

If one of the `assert` check fails in the `in` block of a function, will the function still proceed with the execution of statements in the `do` block?

2

Which of the following tools can be used to check program correctness?

3

If the function has to throw an exception because of invalid parameter

If the function has to throw an exception because of invalid parameter values, then which of the following check statements is most suitable?

4

When an `in` or `out` block is used, the actual body of the function must be specified as a `do` block.
