

Challenge: Output Variable Values in a Statement

Here is a challenge to test the concepts related to variables.

WE'LL COVER THE FOLLOWING ^

- Problem statement
- Input
- Output
- Challenge

Problem statement

In this coding challenge, you have to define two variables in your main function and assign them values 20 and 2.11. Now using these two variables, you have to print the following statement: “*I have exchanged 20 Euros at the rate of 2.11*”.

Input

Two variables having values 20 and 2.11.

Output

```
I have exchanged 20 Euros at the rate of 2.11
```

 Show Hint

Challenge

This problem is designed for you to practice, so try to solve it on your own first. If you get stuck, you can always refer to the explanation and solution provided in the next lesson. Good luck!

provided in the next lesson. Good luck!

```
import std.stdio;

void OutputStatement() {

    // Replace the line below with your code
    write(" ");

}
```

Output a statement

In the next lesson, we will look at the solution to this coding challenge.
