

# Exercises: Edit and Delete Messages

Allow the user to edit and delete the content in the chat window.

The Skypey app we've built here isn't all there is to the app. There are two more tasks for you.

- Extend the Skypey app we built to handle editing and deleting a user's message as shown below.

Those should be fun to implement!

```
import { SET_ACTIVE_USER_ID, SET_TYPING_VALUE, SEND_MESSAGE } from "../constants/action-types"

export const setActiveUserId = id => ({
  type: SET_ACTIVE_USER_ID,
  payload: id
});

export const setTypingValue = value => ({
  type: SET_TYPING_VALUE,
  payload: value
})

export const sendMessage = (message, userId) => ({
```

```
export const sendMessage = (message, userId) => ({
  type: SEND_MESSAGE,
  payload: {
    message,
    userId
  }
})
```
