Quiz

A short quiz to test your understanding of objects in OOP in JavaScript.

An object's set of properties include data values and functions.

What does the create() method do?

In the above code, the value of name and age cannot be updated. Is this statement true or false?

4

What is the error in the following code:

```
var human = {
    name : 'Penny',
    age : 32
}
console.log(human[name])
```

Transcion can be canca asing the square brackets in the following way.

```
var human = {
    name : 'Penny',
    age : 32,
    display() {
    console.log("Name is penny and age is 32")
    }
}
human['display']()
```

Properties, including both data values and functions, can be deleted or removed from an object using the delete operator.

What should be the return statement in the display function?

```
var human = {
    name : 'Penny',
    display() {
       //function returns the name of the human
    }
}
```
