# Publishing an Image

In this lesson, you will be provided with a step-by-step process on how to publish an image.

Whichever Registry you choose, publishing an image is a three-step process:

1. Build your image (*docker build*) with the appropriate prefix name or tag (*docker tag*) an existing one appropriately.

2. Log into the Registry (*docker login*).

3. Push the image into the Registry (*docker push*).

Publishing an image to a registry

There are slight variations according to which Registry you use which we'll see in the following chapters.

In the next lesson, we will take a look at the Docker Hub Registry.
