Solution Review : Determine Size of a Dictionary

This lesson will explain how to find the size of a dictionary.

Solution: Use `len()` function

Use the `len(dictionary)` to get the length of the dictionary.

The following python code helps to calculate the size of a dictionary.

```python
def lengthDictionary(Students):
    return len(Students)
Students = {
    "Peter": 10,
    "Isabel": 11,
    "Anna": 9,
    "Thomas": 10,
    "Bob": 10,
    "Joseph": 11,
    "Maria": 12,
    "Gabriel": 10,
}
print(lengthDictionary(Students))
```

Now, let's move on to the next problem.
