- Exercise

In this exercise, we will initialize containers using an initializer list.

Task

Initialize the following containers:

- `std::array`

- `std::vector`

- `std::set`

- `std::unordered_multiset`

with the $\{-10, 5, 1, 4, 5\}$ initializer list.

```cpp
#include <iostream>

int main() {
  // your code goes here
  std::cout << "Hello World";
  return 0;
}
```

Let's go over the solution to this problem in the next lesson.
