Exercise 2: Fibonacci Sequence upto n Number Of Terms

In this exercise, you have to compute Fibonacci series up to n number

Problem Statement

In this exercise, you have to write Fibonacci Sequence of a given `number`.

- You have to print the sequence up to the given `range` which is passed as a *parameter* to the `test` method.

- Your code should **return** the **string** variable `ans` which will have all the **Fibonacci values** computed upto the given `range` appended in that string.

  - Here's a link showing how you can add values to a **string**.

Example

If the value of `range` is **6**.

Then `ans` should have the following stored in it at the end of the method:

Fibonacci Series upto 6 Terms
0 1 1 2 3 5

Display the output above in the console as well.

> **Note** Just like it is shown in the picture above, the values in the **string** should have spaces in between them. You can add a space by simply adding quotation marks with space in between them to your string, like this: " ".

Write your code below. It is recommended that you try solving the exercise yourself before viewing the solution.

Good Luck!

```csharp
using System;
class Exercise1 {

  public static string test(int range) {
    string ans = "xyz"; //return the correct value in this string
    // write your answer here
    return ans;
  }
}
```
