- Exercise

Let's solve an exercise in this lesson.

Problem statement

All credit goes to streams and the `getline` function when it is quite comfortable to read a file.

- Write a program that reads a file line by line.

> We need to write our file name using the **STDIN** button first, then press the **RUN** button.

main.cpp

test.txt

```cpp
#include <iostream>

int main() {

  // Write your code here

  return 0;
}
```

In the next lesson, we'll look at the solution to this exercise.
