Quiz

Here is a quiz based on the concepts covered in this chapter.
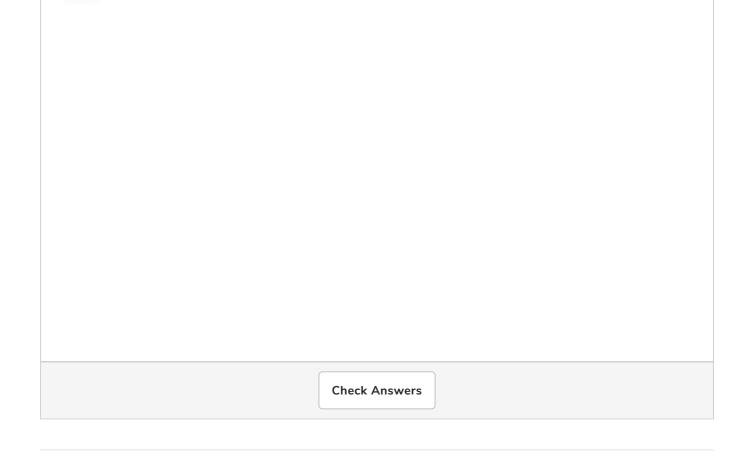

1   We can use the `.length` property of arrays to specify the length of a dynamic array.

2   What will be the output of the following code?

```d
import std.stdio;
import std.algorithm;

void main() {
    int[] array;
    array ~= [10,20];
    array ~= 40;
    array = array.remove(0);
    writeln(array);
}
```

3

Modifying an element of a slice modifies the element of the actual array.

4

While reading string input, which function can be used to remove the trailing control character?

5

Which character/characters can be used for string concatenation?

Check Answers

In the next chapter, you will learn file handling in D.
