Conclusion

Let's look at the biggest takeaways from this chapter.

`React.lazy` and `Suspense` are great and intuitive to work with, however, they do not support server-side rendering yet. It's likely this will change in the future, but in the meantime, if you care about SSR, using react-loadable is your best bet for lazy loading `React` components.

In the next chapter, we'll learn about hooks and how they empower functional components.
