Exercise: Deduce the Outputs

In this lesson, your concepts will be evaluated through a quiz.

Choose one possible correct answer.

1

What is the outcome of a program calling the recursive function `f` with value **5**?

```go
func f(n int) {
    defer func() { fmt.Println(n) }()
    if n == 0 {
        panic(0)
    }
    f(n-1)
}
```

We hope that you performed well in the quiz. That is it about errors and making a program stable. In the next chapter, we'll discuss parallelism and concurrency.
