Quiz

A short quiz to test your understanding of Replica Sets and Sharding in this chapter.

1   The process of synchronizing data across multiple servers in the whole system is called replication.

2   A replica set can consist of more than one primary node.

3   `rs.initiate` initiates the replica set and configures it with a passed JSON document.

4

Vertical scaling includes dividing data and loading, among multiple servers.

5

The combination of multiple shards, mongo's processes, and configuration servers is called sharding cluster.
