Exercise 6: Sign Out with Firebase

Here's all the code we need to implement sign-up, sign-in, and sign-out.

Project

Environment Variables	⌃
Key:	**Value:**
REACT_APP_API_KEY	Not Specified...
REACT_APP_AUTH_...	Not Specified...
REACT_APP_DATAB...	Not Specified...
REACT_APP_PROJEC...	Not Specified...
REACT_APP_STORA...	Not Specified...
REACT_APP_MESSA...	Not Specified...

```
import React from 'react';

const Account = () => (
  <div>
    <h1>Account</h1>
  </div>
);

export default Account;
```

As discussed earlier, the "Sign Out" option is just a button for now. We'll implement its functionality soon.

Exercise

1. Confirm your source code for this section

1. Confirm your source code for this section

Reading Task

1. Read more about Firebase Authentication with E-Mail/Password

---

The next section will explore session handling for a user account.
