Exercise: Displaying Output

In this exercise, you will try printing multiple objects using the Console.WriteLine statement

Try Yourself

Print this line using `Console.WriteLine`:

> The movie quote is: My name is Bond. James Bond!

Output

> **Important Note:** When you write the above line make sure there is only a single space between each word and no space between `is:` . Otherwise, your code won't pass the test case.

It would be better if you try using the `Console.WriteLine` statement by yourself first and then see the solution.

```
using System;

class Display
{
    public static void print()
    {
      //write your code here
      Console.WriteLine("");
    }
}
```
