- Exercise

In this lesson, we'll solve an exercise related to std::for_each.

> **WE'LL COVER THE FOLLOWING** ^
>
> - Problem statement

Problem statement

Calculate the mean of an `std::vector` and an `std::array` with `std::for_each`.

```
#include <iostream>

int main() {

  // Write your code here
}
```

We'll look into the solution of this exercise in the next lesson.
