Summary

In this lesson, we will take a look at what you learned about Firebase Storage by completing this section of the course.

What You Learned

1. Uploading files to Storage
2. Making references to uploaded files in the database.

In the next section, you're going to be making a to-do list application. As a to-do list is personal to each user of the application, we will need the ability to authenticate users. Firebase Authentication makes this task easy to do!
