PBS `qdel` command

The `qdel <job identifier>` command deletes jobs in the order in which their job identifiers are presented to the command. A job that has been deleted is no longer subject to management by batch services.A batch job may be deleted by its owner, the batch operator, or the batch administrator. Example:

```
qdel 11.demo
```

A batch job may be deleted by its owner, the batch operator, or the batch administrator. A batch job being deleted by a server will be sent a `SIGTERM` signal following by a `SIGKILL` signal. The time delay between the two signals is an attribute of the execution queue from which the job was run (settable by the administrator). This delay may be overridden by the `-W` option.
