Exercise 4: Sign Up with Firebase

Let's take a look at the code we have implemented up till now.

Project

Environment Variables		∧
Key:	**Value:**	
REACT_APP_API_KEY	Not Specified...	
REACT_APP_AUTH_...	Not Specified...	
REACT_APP_DATAB...	Not Specified...	
REACT_APP_PROJEC...	Not Specified...	
REACT_APP_STORA...	Not Specified...	
REACT_APP_MESSA...	Not Specified...	

```
import React from 'react';

const Account = () => (
  <div>
    <h1>Account</h1>
  </div>
);

export default Account;
```

The app will look exactly like it did before, but as we have seen, the sign-up functionality has been implemented. The reason we can't see it is because the **Sign Up** page is routed through the **Sign In** page which hasn't been implemented yet.

Exercise

1. Confirm your source code for this section.

Reading Task

1. Read more about **Data Fetching in React** online.

2. Read more about **Higher-order components in React** online.

3. Read more about **Render prop components in React** online.

Now, we can move on to the Sign-In component of our application.
